REASONS FOR ALLOWANCE

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

2. Claims 1-25 are generic and allowable. Accordingly, the restriction requirement as to the encompassed species is hereby withdrawn and claims 6-14, 19, 24, and 25, directed to the nonelected species are no longer withdrawn from consideration since all of the claims to this species depend from or otherwise include each of the limitations of an allowed generic claim. However, claims 26-30, directed to the nonelected species remain withdrawn from consideration since claims 26-30 do not depend upon or otherwise include all the limitations of an allowed generic claim as required by 37 CFR 1.141.

In view of the above noted withdrawal of the restriction requirement as to the linked species, applicant(s) are advised that if any claim(s) depending from or including all the limitations of the allowable generic linking claim(s) be presented in a continuation or divisional application, such claims may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

3. This application is in condition for allowance except for the presence of claims 26-30 directed to a species non-elected without traverse. Accordingly, claims 26-30 have been cancelled.

Drawings

4. The drawings were received on May 17, 2006. These drawings are acceptable.
5. The following is an examiner's statement of reasons for allowance: The prior art when taken separately or combined fails to teach and/or show an apparatus as set forth in Claim 1 having a transflective color filter and a recycling subsystem optically coupled to a light source. The transflective color filter receives light along an incident axis and reflects along a reflectance axis. The incident and reflectance axes of the transflective color filter are non-coincident. The recycling subsystem has an input of light from the transflective color filter positioned on the reflectance axis and an output that is directed back towards the transflective color filter.
1. The prior art when taken separately or combined fails to teach and/or show a method as set forth in Claim 20 having a transflective color filter receiving light along an incident axis and reflecting the light along a reflectance axis this non-coincident with the incident axis. The reflected light is received in a recycling subsystem and then reintroduced into the transflective color filter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
